## Product descriptions

### Production and Performance

*Digitize your production and optimize*

Get an overview of your production as well as the operations, and get access to the reasons behind breakdowns as well as other updates directly from the production floor. The production overview can be installed within very little time and helps uncover bottlenecks as well as increase the general efficiency of the production.

### Energy and Temperature

*Visualize consumption and minimize waste*

Visualize your consumption and automate the documentation by collecting and creating an overview of the energy data as well as temperature so your company can secure its storage while unpleasant surprises during inspections and check-ups are avoided. In addition, your company can minimize waste and so contribute to a green transition.

### Maintenance Planner

*Plan your maintenance and avoid breakdowns*

Maintenance Planner is a system that helps you create a manageable overview of the planning and management of your maintenance. The solution only requires a subscription, and after an easy and quick installation it will help you time your maintenance, increase the level of documentation, and minimize breakdowns.
